SUMMARY

Experienced Data Engineer with over 3.6+ years of expertise in leveraging advanced technologies for smooth collaboration and data analysis. Proficient in SQL, Python, and Azure services such as Azure Data Factory, Azure Databricks, Azure Function App, and PySpark. Skilled in ETL development, report generation, and data security measures. Dedicated to transforming complex datasets into actionable insights that align technical solutions with organizational goals.

SKILLS

- **Programming:** Python, SQL
- **Cloud Platforms:** Azure Data Factory, Azure Databricks, Azure Function Apps, Azure Logic Apps
- **Data Processing:** PySpark, Pandas, ETL
- **Automation Tools:** KNIME, Power BI
- **Other:** Data Validation, Predictive Analysis, Report Generation

WORK EXPERIENCE

Data Engineer, Tranzita Systems

Feb 2021 – Present

Project: OLA RCA (Online Availability Root Cause Analysis) | **Client:** P&G, Mumbai | **Role:** Data Engineer

- Designed and maintained data pipelines to ensure seamless data accessibility, facilitating smooth integration across multiple systems.
- Established a rationalized ETL process using Azure Data Factory; findings were utilized to identify bottlenecks leading to two major improvements in operational workflows affecting overall system efficiency.
- Simplified data manipulation by incorporating SQL stored procedures, leading to a 90% decrease in manual tasks and improved operational efficiency.
- Led process optimization for e-commerce platforms such as Amazon, Nykaa, and Flipkart, consolidating end-to-end workflows and minimizing manual intervention by 90%.
- Built and deployed ETL pipelines using Python and SQL with Azure Functions, achieving an 80% reduction in data retrieval time and an 85% improvement in system performance.
- Implemented data validation processes utilizing Azure Data Factory, SQL, and Python, ensuring high-quality data before ingestion into the data lake and enhancing data integrity by 95%.
- Automated ETL pipeline performance tracking with Azure Monitor, Log Analytics, and custom Python scripts, resulting in a 70% decrease in downtimes and faster issue resolution.
- Optimized SQL queries and streamlined data transformation workflows with Python, reducing query response times by 60% and improving overall pipeline efficiency.

Project: Transport Audit Process Automation | **Client:** P&G, Mumbai | **Role:** Data Engineer

- Automated e-commerce order processing audits using Python's pandas library, achieving 95% record iteration and ensuring thorough data validation and accuracy, significantly reducing error rates in order tracking systems.
- Developed and implemented KNIME workflows to streamline quarterly audits and analyze sample data, resulting in a 95% decrease in manual auditing time and saving approximately 120 hours per quarter, enhancing audit cycle efficiency.
- Collaborated with cross-functional teams to refine audit criteria and enhance workflow logic, ensuring more precise data sampling and quicker audit turnaround times, improving overall data compliance by 30%.
- Optimized reporting processes by integrating KNIME workflows with SQL databases, automating data extraction and report generation, which accelerated the delivery of audit results by 80%.

Project: Demand Forecasting | **Client:** P&G, Mumbai | **Role:** Data Engineer

- Employed advanced data analysis to forecast market demand for stocks with over 85% accuracy, improving profit margins and risk management strategies by identifying optimal buying and selling opportunities.
- Utilized Python to effectively manage and assess large datasets, ensuring precise data handling and accuracy in computations. This approach amplified project outcomes by 30% through more dependable, data-driven decision-making.
- Constructed predictive models using machine learning algorithms in Python, boosting forecasting accuracy for stock market trends and facilitating better-informed investment strategies, resulting in a 20% increase in portfolio performance.
- Refined data transformation processes by automating data cleaning and normalization with Python, decreasing processing time by 40% and enabling quicker insights and enhanced decision-making capabilities.

Project: OSA (On Shelf Availability) | **Client:** P&G, Mumbai | **Role:** Data Engineer

- Engineered a data-driven approach for sales and inventory optimization, merging weekly data trends with 3-day predictive models to enhance forecasting accuracy.
- Achieved 95% precision in predicting sales and product availability, leading to a 20% decline in stockouts and a 15% reduction in overstock occurrences.
- Constructed an ETL framework using Azure Data Factory to optimize data loading into SQL, boosting data integration effectiveness by 50%.
- Created a reusable SQL procedure significantly elevated Power BI reporting, enabling more insightful and analytical business decisions.
- Refined the ETL pipeline performance by employing data partitioning and parallel processing techniques, resulting in a 35% decrease in data processing time and increased efficiency in reporting.
- Incorporated real-time data feeds into the sales and inventory management system, delivering timely insights and allowing for more agile decision-making.
- Elevated forecasting accuracy and replenishment strategies by 25% through efficient data integration.
- Designed and executed advanced data visualizations in Power BI, utilizing improved SQL stored procedures to develop interactive dashboards and detailed reports.
- Strengthened stakeholder engagement and promoted effective data-driven initiatives through the creation of impactful visual analytics.

EDUCATION

Dr. APJ Abdul kalam Technical University, B.Tech in ECE

Aug 2016 - Sept 2020
